## PREFACE

The annual Trade of Canada report for 1957 is published in three volumes.

Volume I contains summary tables, analytical tables, and tables showing Canadian trade with each country by principal commodities.

Volume II contains export statistics by commodities, showing all countries to which each commodity was sent. This volume presents full detail for both domestic exports and re-exports.

Volume III contains import statistics by commodities, showing all countries from which each commodity was obtained. This volume presents separately for each commodity statistics on free imports, dutiable imports and duty collected.

As a result of a change, as of January 1, 1957, in the classification of exports of uranium ores and concentrates, appropriate adjustments were made retroactively in the relevant tables in Volume I. A discussion of the nature and effects of this change, together with a list of the tables involved, appears in a special note at the end of this report.

Certain changes have taken place in recent years in the classification of countries according to which Canada's trade statistics are compiled. Effective January 1, 1956, trade statistics on Canada's trade with the Sudan (formerly Anglo-Egyptian Sudan) are no longer included in Commonwealth totals, and trade with Mauritius and Seychelles (formerly included in British East Africa) is recorded separately. Also, starting with this volume, the description Gold Coast has been changed to Ghana.

This report was compiled in the External Trade Section of the International Trade Division under the direction of Mr. L.A. Shackleton, Chief of the Section.

## PRÉFACE

Le rapport annuel (1957) sur le commerce du Canada comprend trois volumes.

Le Volume I contient des tableaux sommaires, des tableaux analytiques et des tableaux indiquant les principales denrées échangées avec chaque pays.

Le Volume II contient la statistique des exportations par denrée et indique tous les pays auxquels est allée chaque denrée. Ce volume donne en détail les exportations canadiennes et les ré-exportations.

Le Volume III contient la statistique des importations par denrée et indique tous les pays d'où est venue chaque denrée. Ce volume donne séparément la statistique par denrée des importations non taxables, des importations taxables et les droits perçus.

A la suite d'un changement apporté le 1<sup>er</sup> janvier 1957 au classement des exportations de minerais et de concentrés d'uranium, les rectifications rétroactives nécessaires ont été faites dans les tableaux appropriés du Volume I. On trouvera dans une note spéciale qui paraît à la fin du volume un exposé de la nature et des effets du changement de même qu'une liste des tableaux rectifiés.

Certains changements sont survenus depuis quelques années dans le classement des pays suivant lequel la statistique du commerce canadien est calculée. Depuis le 1<sup>er</sup> janvier 1956, la statistique du commerce du Canada avec le Soudan (autrefois Soudan anglo-égyptien) n'est plus comprise dans les totaux du Commonwealth et le commerce avec les îles Maurice et Seychelles (autrefois comprises dans l'Afrique orientale anglaise) est indiqué à part. A partir du présent volume également, la Côte-de-l'Or change d'appellation et se nomme Ghana.

Le présent rapport a été établi à la Section du commerce extérieur de la Division du commerce international sous la direction de L.A. Shackleton, chef de la section.

## EXPLANATORY NOTES

**1. Source of Data.** Statistics of exports and imports are based upon the declarations of exporters (export entries) and of importers (import entries) as subsequently checked by customs officials.

**2. Valuation.** The value of goods exported is the actual amount received by the exporter in Canadian dollars, excluding such charges as freight, insurance and handling. In effect, therefore, export values are taken f.o.b. point of shipment for export.

The value of goods imported is the value as determined for customs duty purposes. In most cases this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized exchange rates (usually the commercial rate prevailing on the date at which the goods were actually despatched to Canada), and excluding such charges as freight, insurance, handling and taxes. In effect, therefore, import values are taken f.o.b. point of shipment in the country of export.

**3. Units of Quantity.** Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment, except in certain special cases otherwise defined in the Customs Tariff. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used, Imperial standards apply.

In this report are items such as "internal combustion engines and parts" which show a quantity in "number" as well as value. In these items the "number" refers only to the number of substantially complete articles, while the value includes also the value of any parts of the article. For such items the average value per unit cannot be ascertained.

**4. Coverage.** Statistics of "Exports of Canadian Produce" (also known as "Domestic Exports") include both goods wholly produced in Canada and goods previously included in statistics of imports which are changed in form or increased in value by further processing in Canada and then exported. Statistics of "Exports of Foreign Produce" (also known as "Re-Exports") include only goods previously included in statistics of imports which are exported from Canada in the same condition as when imported. Minor operations such as sorting or re-packing are not considered as changing the condition of imported goods.

Statistics of imports include all goods which enter Canada and are cleared by customs officials for domestic sale or use. The series, therefore, includes goods which are cleared by customs

## NOTES EXPLICATIVES

**1. Source des données.** La statistique des exportations et des importations est fondée sur les déclarations des exportateurs (documents d'exportations) et des importateurs (documents d'importations) subseqüemment vérifiées par les fonctionnaires des douanes.

**2. Évaluation.** La valeur des marchandises exportées est le montant réel que les exportateurs reçoivent en dollars canadiens, à l'exclusion des frais de transport, de l'assurance et des frais de manutention. En conséquence, la valeur des exportations est calculée f.a.b. au point d'expédition pour exportation.

La valeur des marchandises importées est la valeur établie pour les besoins des droits de douane. Dans la plupart des cas, elle correspond à la valeur indiquée sur la facture accompagnant les marchandises, valeur exprimée en dollars canadiens au taux d'échange autorisé (habituellement le taux commercial à la date exacte de l'expédition des marchandises au Canada), et à l'exclusion des frais de transport, de l'assurance, des frais de manutention et des taxes. De fait, la valeur des importations est calculée f.a.b. au point d'expédition du pays exportateur.

**3. Unités de quantité.** Le poids, là où il est donné, est le poids net des marchandises, à l'exclusion du poids des emballages exigés pour l'expédition, sauf dans certains cas spéciaux autrement décrits au tarif douanier. L'expression "ton" signifie 2,000 livres et "cwt." 100 livres avoirdupois. Là où d'autres unités de quantité sont employées, les étalons impériaux s'appliquent.

Le présent rapport contient des articles tels que "moteurs à combustion interne et leurs pièces" dont la quantité est indiquée par un "nombre" aussi bien que par la valeur. A cet égard le "nombre" ne désigne que le nombre des articles à peu près complets, tandis que la valeur comprend aussi celle des pièces de l'article. Dans ces cas, il est impossible d'établir la valeur moyenne par unité.

**4. Champ d'application.** La statistique des "Exportations de produits canadiens" (appelées aussi "Exportations domestiques") comprend les marchandises entièrement produites au Canada de même que les marchandises qui figuraient autrefois aux importations, dont la forme a changé ou la valeur a augmenté par la fabrication et qui sont ensuite exportées. La statistique des "Exportations de produits étrangers" (appelées aussi "Réexportations") ne comprend que les marchandises d'abord inscrites aux statistiques des importations et qui ont été exportées du Canada dans l'état où elles étaient lors de leur importation. Les manipulations secondaires telles que le triage et le réemballage ne modifient pas l'état des marchandises importées.

La statistique des importations comprend toutes les marchandises qui entrent au Canada et que les fonctionnaires de la douane libèrent pour la vente ou l'usage au pays. Elles comprennent donc les marchan-

immediately on entry into the country, and goods cleared out of customs warehouses; but excludes goods placed in customs warehouses on entering the country. The technical phrase "Imports entered for consumption" which is sometimes used to describe Canadian import statistics does not imply that all imports will actually be consumed in Canada, but only that they are free to be so consumed without further customs formalities.

**5. Exclusions.** Export and import statistics exclude gold, but include gold products where the value of the gold content is less than 80% of the value of the article. A small amount of gold scrap in the form of jewellers' sweepings is also included.

Export statistics exclude goods shipped to Canadian armed forces or diplomats stationed outside Canada, goods financed under the Defence Appropriation Acts and shipped to Canada's NATO allies, temporary exports for exhibition or competition, and bunker supplies and ships' stores sold to foreign vessels in Canadian ports.

Import statistics exclude some goods for the use of United States forces stationed at treaty bases in Canada, ships of British construction and registry imported for use in Canada, ships purchased for use in foreign trade, bunker supplies and ships' stores purchased by Canadian vessels abroad, temporary imports for exhibition or competition, and Canadian-owned military equipment returned to Canada.

**6. Countries Credited.** Exports are credited to the country to which they are consigned at the time the goods leave Canada. The country of consignment is the country to which goods are intended to pass without interruption of transit, except in the course of transfer from one means of conveyance to another.

Imports are usually credited to the country from which the goods were consigned to Canada. The country of consignment is the country from which goods have come to Canada without interruption of transit, except in the course of transfer from one means of conveyance to another.

An exception to this rule is made in the case of imports of goods originating in Central or South America (including the Antilles and Bermuda) which are consigned to Canada from the United States. This class of imports is credited to the country in which the goods originated.

**7. Time Periods.** Trade statistics for any period include all goods declared on export or import entries received at the Bureau of Statistics during the calendar period in question.

dises dédouanées dès leur entrée au pays, et les marchandises dédouanées des entrepôts de la douane; mais sont exclues les marchandises placées dans les entrepôts de la douane à leur entrée au pays. L'expression technique "importations pour la consommation" qui est quelquefois employée pour décrire les importations canadiennes ne veut pas dire que toutes les marchandises importées seront de fait consommées au Canada, mais seulement que ces marchandises peuvent être consommées au pays sans autres formalités douanières.

**5. Exclusions.** La statistique des exportations et des importations ne comprend pas l'or, mais elle comprend les articles en or dont la valeur de la teneur en or est de moins de 80 p. 100 de la valeur de l'article. Une petite quantité de déchets sous la forme de balayures de bijoutier est aussi incluse.

La statistique des exportations ne comprend pas les marchandises expédiées aux forces armées ou aux diplomates canadiens en mission à l'étranger, les marchandises financées subordonnément aux lois sur les crédits de la défense et expédiées aux alliés du Canada de l'OTAN, les exportations temporaires pour expositions et concours, les approvisionnements de soutes et de navires vendus aux vaisseaux étrangers mouillés dans les ports canadiens.

La statistique des importations ne comprend pas certaines marchandises à l'usage des forces armées américaines occupant par traité des bases canadiennes, les navires de construction et d'immatriculation britanniques importés pour être utilisés au Canada, les navires achetés pour servir au commerce extérieur, les approvisionnements de soutes et de navires achetés par les vaisseaux canadiens à l'étranger, les importations temporaires pour expositions et concours et l'équipement militaire possédé par le Canada et retourné au pays.

**6. Pays de destination.** Les exportations sont attribuées aux pays auxquels elles sont expédiées au moment où elles quittent le Canada. Le pays de destination est le pays vers lequel les marchandises sont expédiées sans interruption de transport, sauf dans le cas d'un transbordement d'un moyen de transport à un autre.

Les importations sont ordinairement attribuées au pays d'où les marchandises ont été consignées au Canada. Le pays de consignment est le pays d'où viennent les marchandises sans autre interruption de transport que les transbordements inévitables.

Il est fait exception à cette règle dans le cas des marchandises en provenance de l'Amérique centrale ou de l'Amérique du Sud (y compris les Antilles et les Bermudes) et expédiées au Canada des États-Unis. Ce groupe d'importations est attribué au pays d'origine des marchandises.

**7. Périodes de temps.** La statistique du commerce pour une période quelconque comprend toutes les marchandises déclarées dans les rapports sur les importations et les exportations qui ont été reçus au Bureau de la statistique durant la période civile observée.

8. **Ports.** The tables of the trade of Canada, by ports and provinces (Tables 13 and 14), show that merchandise was imported or exported at these ports; but this does not imply that goods imported at any port were for consumption there or even in the province in which the port is situated, neither does it imply that goods exported at any port originated there or even in the province in which the port is situated.

9. **Abbreviations.** The letters "N.O.P." mean "not otherwise provided for".

8. **Ports.** Les tableaux du commerce canadien par ports et provinces (tableaux 13 et 14), montrent que les marchandises ont été importées ou exportées à ces ports; mais cela ne signifie pas que les marchandises importées à un port l'ont été pour consommation à ce port ou même dans la province où il est situé; cela ne signifie pas non plus que les marchandises exportées d'un port viennent de ce port ou même de la province où il est situé.

9. **Abbreviations.** Les lettres "n.d.a." signifient "non dénommé ailleurs".

## TREATMENT OF GOLD IN CANADIAN TRADE STATISTICS

The general use of gold as a money metal gives it special attributes which distinguish it from other commodities in trade. In particular, international movements of gold are determined largely by monetary factors and therefore may fluctuate widely from period to period owing to other than ordinary trade or commercial considerations. Also gold is generally acceptable; it does not have to surmount tariff barriers and is normally assured a market at a fixed minimum price.

Furthermore, physical movements of gold between countries have no direct or normal relation to sales and purchases. International transactions in gold often occur without its moving across any frontier, the sales or purchases in such cases being recognized by simply setting aside or "earmarking" the gold in the vaults of a central bank. As trade statistics deal only with physical movements of commodities, they would not record all changes in stocks of gold under earmark. Yet such gold transactions would not be different in their economic nature from many physical shipments.

For these reasons movements of gold in a primary or semi-fabricated state are excluded from the statistics of Canada's commodity trade. Since January 1, 1952, the standard of exclusion in use has been that suggested by the International Monetary Fund and the United Nations Statistical Office. All gold and gold products in which the value of the gold is 80% or more of the total value are excluded. The only exception to this rule is in the items of jewellers' sweepings, where the gold content can not readily be separated from the other metals.

Since gold is produced in Canada primarily as an export commodity, a series showing new gold production available for export is published regularly as a supplement to the trade statistics. This series is the equivalent of gold production in Canada exclusive of gold held by producers before the refining stage (whether at the mine, in transit, or at the Mint) and less any gold consumed by industry in Canada out of current production (normally a minor part of the total). Since November 1, 1951, the series has also excluded increases in commercial gold stocks held in safe-keeping by the Mint for the account of the mines.

Since March 21, 1956, mines not receiving aid under the Emergency Gold Mining Assistance Act have been allowed to sell their gold to private residents and non-residents, either for export or for safe-keeping in Canada. Commencing in April, such sales are now included in the figures for new Gold Production Available for Export.

## TRAITEMENT DE L'OR DANS LA STATISTIQUE DU COMMERCE DU CANADA

L'emploi général de l'or comme métal monétaire lui confère des attributs spéciaux qui le distinguent des autres denrées dans le commerce. Ainsi, en particulier, les mouvements internationaux d'or, étant largement déterminés par des facteurs d'ordre monétaire, peuvent beaucoup fluctuer d'une période à l'autre pour des raisons autres que les raisons ordinaires d'ordre commercial. En outre, l'or est généralement accepté; il n'a pas à surmonter les barrières tarifaires et trouve normalement marché à un prix minimum fixe.

De plus, les mouvements matériels d'or entre pays ne se rattachent pas directement ni normalement aux ventes et achats. Les opérations internationales intéressant l'or s'exécutent souvent sans que l'or franchisse la frontière; en pareils cas, les ventes ou achats sont reconnus simplement par la mise de côté ou l'affectation d'or dans les chambres fortes d'une banque centrale. Comme elle porte uniquement sur les mouvements matériels des denrées, la statistique du commerce ne saurait enregistrer tous les changements apportés à l'or affecté. Et pourtant ces opérations intéressant l'or ne diffèrent pas du point de vue économique d'une foule d'expéditions matérielles.

Voilà pourquoi les mouvements d'or brut ou semi-ouvré ne figurent pas dans la statistique du commerce canadien de denrées. Depuis le 1<sup>er</sup> janvier 1952, la règle adoptée est celle qu'ont proposée le Fonds monétaire international et le Bureau de statistique des Nations Unies: exclure tout l'or et tous les produits aurifères dans lesquels la valeur de l'or constitue 80 p. 100 ou plus de la valeur totale. Seules font exception les balayures de bijoutier dont la teneur en or ne peut pas facilement être séparée des autres métaux.

Comme l'or est avant tout produit au Canada comme denrée d'exportation, une série indiquant la production nouvelle d'or exportable paraît régulièrement comme supplément de la statistique du commerce. Cette série équivaut à la production d'or au Canada, à l'exclusion de l'or détenu par les producteurs avant l'affinage (à la mine, en cours de route ou à la Monnaie) et de l'or consommé par l'industrie au Canada et prélevé sur la production courante (normalement une petite partie du total). Depuis le 1<sup>er</sup> novembre 1951, la série a aussi fait exclusion des augmentations de stocks d'or gardés en sûreté par la Monnaie pour le compte des mines.

Depuis le 21 mars 1956, les mines, qui ne reçoivent pas d'aide en vertu de la loi d'urgence sur l'aide à l'exploitation des mines d'or, ont été autorisées à vendre leur or à des particuliers résidant ou non résidant, soit pour l'exportation soit pour le conserver en sûreté au Canada. Depuis avril, ces ventes sont incluses dans les chiffres sur la production d'or neuf destiné à l'exportation.

Because the value of new gold production available for export is a production series, a breakdown of the figures into transactions with individual countries is not possible. Much of this gold is offset in the balance of payments accounts by an increase in Canada's official reserves, rather than by the receipt of exchange from another country. The United States has been for many years the chief market for Canada's gold production, but such commercial exports of gold as now occur are normally directed to other markets.

Comme la statistique de la valeur de la production nouvelle d'or exportable est une statistique de la production, il n'est pas possible de décomposer les chiffres suivant les opérations intervenues avec chaque pays. Une bonne partie de cet or est contrebalance dans les comptes de la balance des paiements par une augmentation des réserves officielles du Canada plutôt que par la réception de devises d'un autre pays. Les États-Unis sont depuis plusieurs années le principal marché de l'or produit au Canada, mais les exportations commerciales d'or comme il en est aujourd'hui se dirigent normalement vers d'autres marchés.

### VALUE, PRICE AND VOLUME INDEXES OF EXPORTS AND IMPORTS

Changes in the value of exports or imports between two periods may be caused by variations in the quantity or volume of goods exported or imported, by fluctuations in the prices at which trade is transacted, or by a combination of these factors. If the general level of prices should rise between two periods this will tend to increase the value of trade in the second period even in the absence of an increase in the volume of goods bought and sold. A decline in the price level will tend to depress trade values. Similarly, quantity changes may affect trade values in the absence of price change. When prices and quantities change in the same direction they will produce very sharp value changes in that direction. Or prices and quantities may change in opposite directions, which may cause values to increase while quantities decrease or quantities to increase while values decrease. To assess properly the meaning of changes in the value of trade it is therefore necessary to know the individual influence of price and volume movements on the value totals.

Table 38 presents a comparison of the declared (statistical) values of domestic exports and imports in current dollars and in constant dollars, together with annual indexes of the declared values, prices and physical volume of Canada's trade. Tables 39-44 present the monthly record from January, 1951, of the value, price and volume indexes published regularly in the Trade of Canada monthly reports<sup>1</sup>. These indexes were set up on the interim reference base 1948=100, and are computed on that basis pending conversion to the 1949 base which was since adopted as the official post-war reference base for the Dominion Bureau of Statistics. Monthly indexes have not been calculated for periods prior to July, 1945, but an annual record from 1926 has been published<sup>2</sup>.

The indexes are computed in the following manner. The value index expresses the value of trade in a given period as a percentage of the value in the base period. The price index is of the fixed-weight aggregative (Laspeyres) type, and combines unit values calculated from the trade statistics with specified wholesale or other price quotations. These latter quotations are used where

### INDICES DE LA VALEUR, DES PRIX ET DU VOLUME DES EXPORTATIONS ET DES IMPORTATIONS

Les changements de la valeur des exportations ou des importations d'une période à l'autre tiennent soit aux variations de la quantité ou du volume des marchandises exportées ou importées, soit aux fluctuations du prix pratiqué, soit à la conjugaison de ces deux facteurs. Si le niveau général des prix augmente d'une période à l'autre, la valeur du commerce de la seconde période aura tendance à augmenter même si le volume des marchandises achetées ou vendues n'augmente pas. Si le niveau des prix baisse, la valeur du commerce aura tendance à baisser. De même, les changements de la quantité peuvent, sans que les prix changent, modifier la valeur du commerce. Lorsque les prix et les quantités évoluent dans le même sens, il en résulte de très vifs changements de valeur dans ce sens. Enfin, les prix et les quantités peuvent évoluer en sens contraire et alors les valeurs augmentent tandis que les quantités diminuent ou bien les quantités augmentent tandis que les valeurs diminuent. Pour apprécier pleinement la portée des changements de la valeur du commerce, il faut donc connaître l'effet particulier du mouvement des prix et du volume sur la valeur totale.

Le tableau 38 compare la valeur (statistique) déclarée des exportations domestiques et des importations en dollars valeur courante et en dollars valeur constante et donne les indices annuels de la valeur déclarée, des prix et du volume physique du commerce canadien. Les tableaux 39-44 donnent depuis janvier 1951 les indices mensuels de la valeur, des prix et du volume publiés régulièrement dans les rapports mensuels portant sur le commerce du Canada<sup>1</sup>. Ces indices ont été calculés d'après la période de base provisoire de 1948 à 100 et sont calculés sur cette base jusqu'à la conversion à la base de 1949, qui a été adoptée depuis comme période de base officielle d'après-guerre par le Bureau fédéral de la statistique. Il n'existe pas d'indices mensuels pour les périodes antérieures à juillet 1945, mais un état annuel à compter de 1926 a déjà paru<sup>2</sup>.

Voici comment sont établis les indices. L'indice de la valeur exprime la valeur du commerce d'une période donnée en pourcentage de la valeur de la période de base. L'indice des prix est un indice collectif à coefficient fixe (type Laspeyres) et combine les valeurs unitaires établies d'après la statistique commerciale avec certains prix de gros ou autres. Ces prix sont utilisés lorsque l'insuffisance de données

<sup>1</sup> Ces séries sont expliquées en détail dans *Indices des prix des exportations et des importations, par mois, juillet 1945 - juin 1950 (1948=100)*, Bureau fédéral de la statistique, 1950 (Document de référence n° 8).

<sup>2</sup> Les données annuelles antérieures se trouvent dans *Indices des prix des exportations et des importations, 1926-1948 (1935-9=100)*, Bureau fédéral de la statistique, 1949 (Document de référence n° 5); voir les dernières révisions de ces données dans *Revue du commerce extérieur du Canada, premier semestre, 1954*, Bureau fédéral de la statistique, 1954, pp. 23-31.

inadequate quantity reporting or insufficiently homogeneous items in the trade statistics prevent the obtaining of sufficiently representative unit value series. The volume index is then derived by dividing the value index by the corresponding price index, and is, therefore, of the currently-weighted (Paasche) type. The relationship between these series is thus multiplicative, not additive. The constant dollar values of Table 38 are computed by dividing the declared values by corresponding price indexes. As division by the published (Laspeyres) price indexes yields constant dollar values in which the groups do not sum to the total, a separate price index of the moving-current-weight (Paasche) type has been used in this computation.

In computing the price index certain minor adjustments were made to the regular grouping of commodities used in the trade statistics, and all three indexes are presented on the basis of these adjusted groups. Thus the groups "agricultural and vegetable products" and "animals and animal products" are combined into one group now titled "agricultural and animal products"; the sub-group "rubber and its products" is transferred to the "miscellaneous products" group; and ships are transferred to the "iron and steel and products" group. In the case of imports only, plumbing and heating equipment is transferred to the "non-ferrous metals and products" group, phosphate rock to the "chemicals and fertilizer" group, and advertising matter to the "miscellaneous products" group. Two items, "imports for the use of the United Kingdom government" (9194) and "imports for the use of British or NATO countries" (9196), are deducted from "miscellaneous products" and total imports. Otherwise the totals to which the indexes apply are those elsewhere published in the trade statistics.

quantitatives ou des articles insuffisamment homogènes dans la statistique commerciale ne permettent pas d'établir des séries de valeurs unitaires suffisamment représentatives. On obtient ensuite l'indice du volume en divisant l'indice de la valeur par l'indice des prix correspondant; l'indice du volume est donc un indice à pondération courante (type Paasche). Ces séries sont ainsi en rapport multiplicatif et non pas additif. On obtient les valeurs en dollars constants du tableau 38 en divisant les valeurs déclarées par les indices des prix correspondants. Comme la division par les indices des prix publiés (Laspeyres) donne des valeurs en dollars constants dont les groupes, si on les additionne, ne correspondent pas avec le total, on a utilisé pour établir ce calcul, un indice des prix distinct à poids courant mobile (type Paasche).

Dans le calcul de l'indice des prix, on a apporté certains ajustements secondaires au groupement normal des denrées utilisé par la statistique commerciale et tous les trois indices se fondent sur ces groupes ajustés. Voici ces ajustements: les groupes "produits agricoles et végétaux" et "animaux et produits animaux" sont réunis en un seul groupe maintenant nommé "produits agricoles et animaux"; le sous-groupe "caoutchouc et produits" est passé au groupe "produits divers"; et les bateaux sont passés au groupe "fer et acier et produits". Dans le cas des importations seulement, l'équipement de tuyauterie et de chauffage est passé au groupe "métaux non ferreux et produits", la roche phosphatée, au groupe "produits et engrais chimiques", et les matières publicitaires, au groupe "produits divers". Deux postes, "importations à l'usage du gouvernement du Royaume-Uni" (9194) et "importations à l'usage des pays britanniques ou membres de l'OTAN" (9196), sont supprimés des "produits divers" et des importations totales. Hormis cela, les totaux que visent les indices sont les totaux figurant ailleurs dans la statistique commerciale.

<sup>1</sup> The groups presented in these tables are adjusted to improve group coverage for pricing purposes. See explanatory notes.

<sup>2</sup> Revised data. For exports, revisions in declared values and value and volume indexes include transfer of Uranium ores and concentrates from Chemicals to Non-ferrous metals. See page 297.

<sup>3</sup> Adjusted totals: Import trade content excludes imports for the use of the United Kingdom or other NATO governments; export trade content excludes exports of foreign produce.

<sup>4</sup> Converted by Paasche price index. See explanatory notes.

<sup>1</sup> Les groupes figurant à ces tableaux sont remaniés de manière à les rendre plus compréhensifs quant aux prix. Voir les notes explicatives.

<sup>2</sup> Chiffres révisés. Pour les exportations, les révisions des valeurs déclarées et des indices de la valeur et du volume comprennent le transfert des minerais et concentrés d'uranium de "produits chimiques" à "métaux non ferreux". Voir page 297.

<sup>3</sup> Totaux rectifiés: le commerce d'importation ne comprend pas les importations pour l'usage du gouvernement du Royaume-Uni ou les autres pays de l'OTAN; le commerce d'exportation ne comprend pas les produits d'origine étrangère.

<sup>4</sup> Convertis à l'aide de l'indice des prix Paasche. Voir les notes explicatives.

### TRADE BY THE STANDARD INTERNATIONAL TRADE CLASSIFICATION<sup>1</sup>

Users of foreign trade statistics of more than one country have always been faced with serious difficulties arising from the limited comparability between such data, most countries having their own distinct statistical classifications of commodities. The League of Nations made an effort to solve this problem by suggesting as a basic classification its *Minimum List of Commodities for International Trade Statistics*. The League's work was resumed after the war under the direction of the United Nations Statistical Commission which, in 1950, approved the *Standard International Trade Classification*. National governments were urged to make use of the S.I.T.C., either by adopting it as a primary classification in compiling their trade statistics, or by converting national statistical data to it for international use. Canadian trade statistics are now converted to the S.I.T.C. and current data are published, along with the statistics of several other countries, in the United Nations *Commodity Trade Statistics* series<sup>2</sup>.

Statistics showing Canadian trade during the calendar years 1956 and 1957 on the basis of the S.I.T.C. are presented in the following table. It should be noted that Table 45 relates to total exports (Canadian produce plus foreign produce), and that totals for imports differ from those appearing in other tables of this report by the exclusion of foreign coin, except gold, and repairs on ships and vessels.

The keys for converting Canada's export and import commodity statistics to the S.I.T.C. have been revised since the publication of the first indexed edition of the S.I.T.C. in April, 1953. The data for 1956 and 1957 appearing in Table 45 were compiled according to the revised keys, and therefore do not compare exactly with figures published in this table prior to 1953. It is expected that a few further revisions may be made to the present commodity indexes for the S.I.T.C. After this question has been clarified revised data will be prepared for earlier years.

### COMMERCE SELON LA CLASSIFICATION TYPE POUR LE COMMERCE INTERNATIONAL<sup>1</sup>

La statistique du commerce extérieur de plus d'un pays a toujours présenté à ses utilisateurs de graves difficultés en raison de la comparabilité limitée des données, la plupart des pays ayant leur propre classification des marchandises. La Société des Nations, cherchant à résoudre le problème, avait proposé comme classification de base sa *Liste minimum de marchandises pour la statistique du commerce international*. Le travail de la Société a été repris après la guerre sous la direction de la Commission de statistique de l'Organisation des Nations Unies qui, en 1950, approuva la *Classification type pour le commerce international*. Les gouvernements nationaux furent priés de se servir de la C.T.C.I., soit comme classification de base dans l'établissement de leur statistique du commerce, soit en modifiant la présentation de leur statistique conformément à la nouvelle classification. Le Canada a déjà adapté sa statistique du commerce à la C.T.C.I., et les données courantes de mêmes que celles de plusieurs autres pays sont publiées dans le bulletin des Nations Unies *Commodity Trade Statistics*<sup>2</sup>.

Les statistiques du commerce canadien pour les années civiles 1956 et 1957 sont données dans les tableaux qui suivent, d'après la C.T.C.I. Il est à noter que le tableau 45 a trait aux exportations totales (produits canadiens et réexportations) et que les totaux des importations diffèrent de ceux des autres tableaux du présent rapport, puisqu'ils ne comprennent pas le numéraire étranger, sauf l'or, ni la réparation des navires et vaisseaux.

Les explications sur la façon de ramener la statistique des exportations et des importations de marchandises du Canada à la C.T.C.I. ont été révisées depuis la publication de la première édition indexée de cette classification, en avril 1953. Les données pour 1956 et 1957 qui paraissent au tableau 45 ont été calculées d'après cette révision et, en conséquence, ne sont pas rigoureusement comparables aux chiffres du même tableau publiés avant 1953. Quelques autres révisions seront peut-être faites aux indices des denrées pour la C.T.C.I. Cette question une fois réglée, des données révisées seront établies pour les années antérieures.

### IMPORTS FROM CENTRAL AND SOUTH AMERICA

Until the middle of 1946, all imports were credited in Canadian trade statistics to the countries from which the goods were consigned to Canada. But beginning in July, 1946, a new method was adopted for crediting goods produced in Central or South America (including Bermuda and the West Indies) but consigned to Canada from the United States (and usually purchased in that country). This was to credit such shipments to the country in which the goods were originally produced.

At the time when this change was made its effect on Canadian trade statistics was minor. Under immediate post-war trading conditions almost all shipments of Central and South American goods were consigned to Canada from the country in which the goods were produced. With the return of more normal trading conditions a much greater proportion of these countries' goods has since come to be consigned to Canada from entrepôt markets in the United States.

A survey was begun in 1953 to determine the amount of imports credited to Central or South American countries which was actually consigned to Canada from the United States. Columns 4 and 8 of Table 46 show the value of imports thus recorded in 1956 and 1957. While only a minor part of recorded imports from Commonwealth countries in Central and South America was actually consigned to Canada from the United States, and while the proportion was also low for Venezuela and the Netherlands Antilles (whose chief export to Canada is oil), for most other countries the amounts concerned were substantial. During the 1953-1955 period, on the average about 30 per cent of total imports recorded as from these other countries was actually consigned to Canada from the United States.

For many years Canadian trade statistics have included tables showing imports which moved *through* the United States en route to Canada, though consigned to Canada from some third country (see Tables 15 and 17). One use of these tables is to show the amount of Canadian imports handled by United States seaports rather than by Canadian seaports. But when imports of goods of Central or South American origin consigned to Canada from the United States began to be classified by country of origin, the tables of trade via United States ports no longer fully revealed the extent to which Canadian importers used United States ports. The reason is that this special category of imports enters neither the total of imports from the United States nor the total of imports consigned from a third country and shipped to Canada *via* a United States seaport. Consequently imports from Central

### IMPORTATIONS DE L'AMÉRIQUE CENTRALE ET DE L'AMÉRIQUE DU SUD

Jusqu'au milieu de 1946, toutes les importations du Canada étaient attribuées dans la statistique du commerce du Canada aux pays d'où les marchandises étaient expédiées au Canada. A compter de juillet 1946, cependant, une nouvelle méthode a été adoptée à l'égard des marchandises produites dans l'Amérique centrale ou l'Amérique du Sud (y compris les Bermudes et les Antilles), mais expédiées des États-Unis au Canada (et habituellement achetées aux États-Unis), afin de les attribuer au pays où elles étaient originellement produites.

A l'époque où le changement a été opéré, la statistique du commerce du Canada s'en est peu ressentie. Au lendemain de la guerre alors que régnaient des conditions commerciales bien particulières, presque tous les envois de marchandises de l'Amérique centrale et de l'Amérique du Sud étaient expédiés au Canada à partir du pays même où elles étaient produites. Depuis le retour de conditions plus normales, une proportion beaucoup plus grande des marchandises de ces pays sont expédiées au Canada à partir des marchés américains où elles sont entreposées.

On a commencé un relevé en 1953 afin de déterminer le chiffre des importations attribuées aux pays de l'Amérique centrale ou de l'Amérique du Sud qui étaient en fait expédiées des États-Unis au Canada. Les colonnes 4 et 8 du tableau 46 montrent la valeur de ces importations en 1956 et 1957. Si seulement une faible partie des importations enregistrées des pays du Commonwealth situés en Amérique centrale ou en Amérique du Sud étaient réellement expédiées des États-Unis au Canada et si la proportion en était faible aussi quant au Venezuela et aux Antilles néerlandaises (dont la principale marchandise exportée au Canada est l'huile), elle était considérable dans le cas de la plupart des autres pays. En moyenne, 30 p. 100 environ de toutes les importations enregistrées comme provenant de ces autres pays ont été en fait expédiées des États-Unis au Canada au cours de la période 1953-1955.

Depuis plusieurs années, la statistique du commerce du Canada comprenait des tableaux montrant les importations acheminées *via* les États-Unis sur le Canada, bien qu'elles fussent expédiées de quelque troisième pays au Canada (voir tableaux 15 et 17). Ces tableaux servent en particulier à montrer le chiffre des importations canadiennes qui sont passées par les ports de mer américains plutôt que par les ports de mer canadiens. Cependant, lorsqu'on a commencé à classer selon le pays d'origine les importations de marchandises provenant de l'Amérique centrale ou de l'Amérique du Sud, les tableaux des marchandises passant par les ports américains ne montraient plus pleinement jusqu'à quel point les importateurs canadiens utilisaient les ports américains. La raison en est que cette catégorie spéciale d'importations ne figure ni dans le total des importations provenant des États-Unis ni dans celui des importations provenant d'un troisième pays et expédiées au Canada *via* un port de mer améri-

or South American countries direct to Canadian seaports seemed greater than was in fact the case (the totals being estimated by deducting the data in Table 17 from those in Table 10) by the amount of goods consigned from the United States but credited to some Central or South American country. However the correct totals for direct shipments can now be obtained from Table 46.

Table 46 shows in columns 1 and 5 total imports recorded as from Central or South American countries (these figures also appear in Table 10). The amount of goods originating in Central or South America but consigned to Canada from the United States is shown in columns 4 and 8 (such shipments would be credited to the United States, rather than as in this case to the country of origin, under the procedure used to classify other imports). Columns 3 and 7 show imports consigned to Canada from Central or South American countries but shipped *through* a United States seaport (these figures also appear in Table 17). Thus direct shipments to a Canadian port from such countries, as shown in columns 2 and 6, can be obtained by deducting columns 3 and 4 and columns 7 and 8 from columns 1 and 5, respectively.

cain. En conséquence, les importations en provenance des pays de l'Amérique centrale ou de l'Amérique latine et acheminées directement sur les ports de mer canadiens semblaient plus élevées qu'en réalité (on évalue les chiffres en soustrayant ceux du tableau 17 de ceux du tableau 10) en raison, de la quantité de marchandises expédiées des États-Unis mais attribuées à quelque pays de l'Amérique centrale ou de l'Amérique latine. Au moyen du tableau 46 on peut toutefois obtenir les chiffres exacts quant aux expéditions directes.

Le tableau 46 montre aux colonnes 1 et 5 les importations totales enregistrées comme provenant des pays de l'Amérique centrale ou de l'Amérique latine (ces chiffres paraissent aussi au tableau 10). La quantité de marchandises en provenance de l'Amérique centrale ou de l'Amérique latine mais expédiées au Canada des États-Unis est indiquée aux colonnes 4 et 8 (ces expéditions doivent être attribuées aux États-Unis plutôt que, ainsi que dans le cas présent, au pays d'origine d'après la même méthode que celle qui sert au classement des autres importations). Les colonnes 3 et 7 donnent les importations expédiées des pays de l'Amérique centrale et de l'Amérique latine au Canada mais acheminées sur le Canada *via* un port de mer des États-Unis (ces chiffres paraissent aussi au tableau 17). Ainsi les expéditions directes de ces pays sur un port de mer du Canada, ainsi qu'il est indiqué aux colonnes 2 et 6, peuvent être calculées en soustrayant, respectivement, les colonnes 3 et 4 et les colonnes 7 et 8 des colonnes 1 et 5.

### CHANGE IN CLASSIFICATION OF URANIUM ORES AND CONCENTRATES

Prior to October 1, 1954, exports of uranium ores and concentrates were included in export statistical class 6580, non-ferrous ores, n.o.p., at nominal values only. This procedure resulted in a significant undercounting of the total value of Canadian exports; during the first nine months of 1954 alone, the shortfall amounted to \$17 million. Consequently, as of October 1, 1954, arrangements were made to show the true value of uranium exports, but to prevent its disclosure uranium ores and concentrates were transferred to statistical class 8490, drugs and chemicals, n.o.p.

Following the relaxation of restrictions on the publication of statistics relating to exports of uranium, a new export statistical class 6560 was established as of January 1, 1957. The transfer of uranium from class 8490 to 6560 has affected the various alternative classifications of Canadian trade in the following way:

Commodity Classification	Changes due to Transfer of Uranium from 8490 to 6560 as of January 1, 1957
By Component Material	Chemicals and Allied Products to Non-ferrous Metals and Products
By Origin	Mixed Origin to Mineral Origin
By Degree of Manufacture	Fully or Chiefly Manufactured to Raw Materials
By Purpose	Miscellaneous and Unclassified to Producers' Materials
By the S.I.T.C.	Chemicals to Crude Materials, Inedible

### MODIFICATION APPORTÉE À LA CLASSIFICATION DES MINÉRAIS ET CONCENTRÉS D'URANIUM

Jusqu'au 1<sup>er</sup> octobre 1954, les exportations de minéral et de concentrés d'uranium étaient classées dans le groupe statistique d'exportations n° 6580, (minerais non ferreux, n.d.a.), et on leur attribuait une valeur nominale. L'emploi de cette formule a provoqué une importante sous-évaluation du total des exportations canadiennes, sous-évaluation qui, pendant les neuf premiers mois de 1954, atteignait déjà quelque dix-sept millions de dollars. C'est pourquoi il a été décidé que, partant du premier octobre 1954, la valeur réelle des exportations d'uranium serait portée dans les statistiques; mais afin d'en dissimuler le montant, les minerais et concentrés d'uranium ont été transférés au groupe statistique n° 8490, (drogues et produits chimiques, n.d.a.).

Dès qu'ont été levées les restrictions qui pesaient sur la publication de statistiques touchant l'exportation de l'uranium, on a créé un nouveau groupe statistique d'exportations, (n° 6560), qui est entré en vigueur le premier janvier 1957. Le transfert de l'uranium du groupe 8490 au groupe 6560 a eu les effets suivants sur les différentes classifications du commerce du Canada:

Classification de la marchandise	Modifications nécessaires par suite du transfert, en date du 1 <sup>er</sup> janvier 1957, de l'uranium du groupe 8490 au groupe 6560
Selon l'élément principal	Produits chimiques et leurs dérivés à Métaux non ferreux et leurs produits
Selon leur origine	Origines diverses à Origine minérale
Selon le degré de transformation	Complètement ou principalement ouvrées à Matières premières
Selon l'usage ou la destination	Diverses et non classifiées à Matières premières servant à la production
Selon la C.T.C.I.	Produits chimiques à Matières brutes, non comestibles

In this volume the data affected by the classification changes described above (Tables 7, 22, 26, 27, 29, 32, 33, 34, 36, 38, 40, 44, 45) are adjusted for the years 1954-56 according to the classification of uranium (class 6560) in effect as of January 1, 1957. All exports of uranium ores and concentrates during the period October 1, 1954 to December 31, 1956 were to the United States. The value of these exports, by months, is shown in the following statement:

Dans le présent volume, les différentes statistiques qui sont touchées par les modifications en question (tableaux 7, 22, 26, 27, 29, 32, 33, 34, 36, 38, 40, 44 et 45) ont été rectifiées pour les années 1954 à 1956 conformément à la classification de l'uranium dans le groupe 6560, en vigueur depuis le premier janvier 1957. Tous les minerais et concentrés d'uranium exportés entre le premier octobre 1954 et le 31 décembre 1956 ont été dirigés vers les États-Unis. ## PREFACE

The annual Trade of Canada report for 1958 is published in three volumes.

Volume I contains summary tables, analytical tables, and tables showing Canadian trade with each country by principal commodities.

Volume II contains export statistics by commodities, showing all countries to which each commodity was sent. This volume presents full detail for both domestic exports and re-exports.

Volume III contains import statistics by commodities, showing all countries from which each commodity was obtained. This volume presents separately for each commodity statistics on free imports, dutiable imports and duty collected.

As a result of a change, as of January 1, 1957, in the classification of exports of uranium ores and concentrates, appropriate adjustments were made retroactively in the relevant tables in Volume I. A discussion of the nature and effects of this change, together with a list of the tables involved, appears in a special note at the end of this report.

Certain changes have taken place in recent years in the classification of countries according to which Canada's trade statistics are compiled. Effective January 1, 1956, trade statistics on Canada's trade with the Sudan (formerly Anglo-Egyptian Sudan) are no longer included in Commonwealth totals, and trade with Mauritius and Seychelles (formerly included in British East Africa) is recorded separately; in 1957, the description Gold Coast has been changed to Ghana.

This report was compiled in the External Trade Section of the International Trade Division under the direction of Mr. L.A. Shackleton, Chief of the Section.

## PRÉFACE

Le rapport annuel (1958) sur le commerce du Canada comprend trois volumes.

Le Volume I contient des tableaux sommaires, des tableaux analytiques et des tableaux indiquant les principales denrées échangées avec chaque pays.

Le Volume II contient la statistique des exportations par denrée et indique tous les pays auxquels est allée chaque denrée. Ce volume donne en détail les exportations canadiennes et les réexportations.

Le Volume III contient la statistique des importations par denrée et indique tous les pays d'où est venue chaque denrée. Ce volume donne séparément la statistique par denrée des importations non taxables, des importations taxables et les droits perçus.

A la suite d'un changement apporté le 1<sup>er</sup> janvier 1957 au classement des exportations de minerais et de concentrés d'uranium, les rectifications rétroactives nécessaires ont été faites dans les tableaux appropriés du Volume I. On trouvera dans une note spéciale qui paraît à la fin du volume un exposé de la nature et des effets du changement de même qu'une liste des tableaux rectifiés.

Certains changements sont survenus depuis quelques années dans le classement des pays suivant lequel la statistique du commerce canadien est calculée. Depuis le 1<sup>er</sup> janvier 1956, la statistique du commerce du Canada avec le Soudan (autrefois Soudan anglo-égyptien) n'est plus comprise dans les totaux du Commonwealth et le commerce avec les îles Maurice et Seychelles (autrefois comprises dans l'Afrique orientale anglaise) est indiqué à part; en 1957, la Côte-de-l'Or change d'appellation et se nomme Ghana.

Le présent rapport a été établi à la Section du commerce extérieur de la Division du commerce international sous la direction de L.A. Shackleton, chef de la section.

## EXPLANATORY NOTES

**1. Source of Data.** Statistics of exports and imports are based upon the declarations of exporters (export entries) and of importers (import entries) as subsequently checked by customs officials.

**2. Valuation.** The value of goods exported is the actual amount received by the exporter in Canadian dollars, excluding such charges as freight, insurance and handling. In effect, therefore, export values are taken f.o.b. point of shipment for export.

The value of goods imported is the value as determined for customs duty purposes. In most cases this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized exchange rates (usually the commercial rate prevailing on the date at which the goods were actually despatched to Canada), and excluding such charges as freight, insurance, handling and taxes. In effect, therefore, import values are taken f.o.b. point of shipment in the country of export.

**3. Units of Quantity.** Weight, where shown, is the net weight of the goods, excluding the weight of such packing as is required for shipment, except in certain special cases otherwise defined in the Customs Tariff. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used, Imperial standards apply.

In this report are items such as "lawn mowers, power, and parts" which show a quantity in "number" as well as value. In these items the "number" refers only to the number of substantially complete articles, while the value includes also the value of any parts of the article. For such items the average value per unit cannot be ascertained.

**4. Coverage.** Statistics of "Exports of Canadian Produce" (also known as "Domestic Exports") include both goods wholly produced in Canada and goods previously included in statistics of imports which are changed in form or increased in value by further processing in Canada and then exported. Statistics of "Exports of Foreign Produce" (also known as "Re-Exports") include only goods previously included in statistics of imports which are exported from Canada in the same condition as when imported. Minor operations such as sorting or re-packing are not considered as changing the condition of imported goods.

Statistics of imports include all goods which enter Canada and are cleared by customs officials for domestic sale or use. The series, therefore, includes goods which are cleared by customs immediately on entry into the country, and goods cleared out of customs warehouses; but excludes goods placed in customs warehouses on entering the country. The technical phrase "Imports entered for consumption" which is sometimes

## NOTES EXPLICATIVES

**1. Source des données.** La statistique des exportations et des importations est fondée sur les déclarations des exportateurs (documents d'exportations) et des importateurs (documents d'importations) subséquemment vérifiées par les fonctionnaires des douanes.

**2. Évaluation.** La valeur des marchandises exportées est le montant réel que les exportateurs reçoivent en dollars canadiens, à l'exclusion des frais de transport, de l'assurance et des frais de manutention. En conséquence, la valeur des exportations est calculée f.a.b. au point d'expédition pour exportation.

La valeur des marchandises importées est la valeur établie pour les besoins des droits de douane. Dans la plupart des cas, elle correspond à la valeur indiquée sur la facture accompagnant les marchandises, valeur exprimée en dollars canadiens au taux d'échange autorisé (habituellement le taux commercial à la date exacte de l'expédition des marchandises au Canada), et à l'exclusion des frais de transport, de l'assurance, des frais de manutention et des taxes. De fait, la valeur des importations est calculée f.a.b. au point d'expédition du pays exportateur.

**3. Unités de quantité.** Le poids, là où il est donné, est le poids net des marchandises, à l'exclusion du poids des emballages exigés pour l'expédition, sauf dans certains cas spéciaux autrement décrits au tarif douanier. L'expression "ton" signifie 2,000 livres et "cwt." 100 livres avoirdupois. Là où d'autres unités de quantité sont employées, les étalons impériaux s'appliquent.

Le présent rapport contient des articles tels que "tondeuses de gazon à moteur, et leurs pièces" dont la quantité est indiquée par un "nombre" aussi bien que par la valeur. À cet égard le "nombre" ne désigne que le nombre des articles à peu près complets, tandis que la valeur comprend aussi celle des pièces de l'article. Dans ces cas, il est impossible d'établir la valeur moyenne par unité.

**4. Champ d'application.** La statistique des "Exportations de produits canadiens" (appelées aussi "Exportations domestiques") comprend les marchandises entièrement produites au Canada de même que les marchandises qui figuraient autrefois aux importations, dont la forme a changé ou la valeur a augmenté par la fabrication et qui sont ensuite exportées. La statistique des "Exportations de produits étrangers" (appelées aussi "Réexportations") ne comprend que les marchandises d'abord inscrites aux statistiques des importations et qui ont été exportées du Canada dans l'état où elles étaient lors de leur importation. Les manipulations secondaires telles que le triage et le réemballage ne modifient pas l'état des marchandises importées.

La statistique des importations comprend toutes les marchandises qui entrent au Canada et que les fonctionnaires de la douane libèrent pour la vente ou l'usage au pays. Elles comprennent donc les marchandises dédouanées dès leur entrée au pays, et les marchandises dédouanées des entrepôts de la douane; mais sont exclues les marchandises placées dans les entrepôts de la douane à leur entrée au pays. L'expression technique "importations pour la consom-

used to describe Canadian import statistics does not imply that all imports will actually be consumed in Canada, but only that they are free to be so consumed without further customs formalities.

**5. Exclusions.** Export and import statistics exclude gold, but include gold products where the value of the gold content is less than 80% of the value of the article. A small amount of gold scrap in the form of jewellers' sweepings is also included.

Export statistics exclude goods shipped to Canadian armed forces or diplomats stationed outside Canada, goods financed under the Defence Appropriation Acts and shipped to Canada's N.A.T.O. allies, temporary exports for exhibition or competition, and bunker supplies and ships' stores sold to foreign vessels in Canadian ports.

Import statistics exclude some goods for the use of United States forces stationed at treaty bases in Canada, ships of British construction and registry imported for use in Canada, ships purchased for use in foreign trade, bunker supplies and ships' stores purchased by Canadian vessels abroad, temporary imports for exhibition or competition, and Canadian-owned military equipment returned to Canada.

**6. Countries Credited.** Exports are credited to the country to which they are consigned at the time the goods leave Canada. The country of consignment is the country to which goods are intended to pass without interruption of transit, except in the course of transfer from one means of conveyance to another.

Imports are usually credited to the country from which the goods were consigned to Canada. The country of consignment is the country from which goods have come to Canada without interruption of transit, except in the course of transfer from one means of conveyance to another.

An exception to this rule is made in the case of imports of goods originating in Central or South America (including the Antilles and Bermuda) which are consigned to Canada from the United States. This class of imports is credited to the country in which the goods originated.

**7. Time Periods.** Trade statistics for any period include all goods declared on export or import entries received at the Bureau of Statistics during the calendar period in question.

**8. Ports.** The tables of the trade of Canada, by ports and provinces (Tables 13 and 14), show that merchandise was imported or exported at these ports; but this does not imply that goods imported at any port were for consumption there or even in the province in which the port is

mation" qui est quelquefois employée pour décrire les importations canadiennes ne veut pas dire que toutes les marchandises importées seront de fait consommées au Canada, mais seulement que ces marchandises peuvent être consommées au pays sans autres formalités douanières.

**5. Exclusions.** La statistique des exportations et des importations ne comprend pas l'or, mais elle comprend les articles en or dont la valeur de la teneur en or est de moins de 80 p. 100 de la valeur de l'article. Une petite quantité de déchets sous la forme de balayures de bijoutier est aussi incluse.

La statistique des exportations ne comprend pas les marchandises expédiées aux forces armées ou aux diplomates canadiens en mission à l'étranger, les marchandises financées subordonnement aux lois sur les crédits de la défense et expédiées aux alliés du Canada de l'OTAN, les exportations temporaires pour expositions et concours, les approvisionnements de soutes et de navires vendus aux vaisseaux étrangers mouillés dans les ports canadiens.

La statistique des importations ne comprend pas certaines marchandises à l'usage des forces armées américaines occupant par traité des bases canadiennes, les navires de construction et d'immatriculation britanniques importés pour être utilisés au Canada, les navires achetés pour servir au commerce extérieur, les approvisionnements de soutes et de navires achetés par les vaisseaux canadiens à l'étranger, les importations temporaires pour expositions et concours et l'équipement militaire possédé par le Canada et retourné au pays.

**6. Pays de destination.** Les exportations sont attribuées aux pays auxquels elles sont expédiées au moment où elles quittent le Canada. Le pays de destination est le pays vers lequel les marchandises sont expédiées sans interruption de transport, sauf dans le cas d'un transbordement d'un moyen de transport à un autre.

Les importations sont ordinairement attribuées au pays d'où les marchandises ont été consignées au Canada. Le pays de consignment est le pays d'où viennent les marchandises sans autre interruption de transport que les transbordements inévitables.

Il est fait exception à cette règle dans le cas des marchandises en provenance de l'Amérique centrale ou de l'Amérique du Sud (y compris les Antilles et les Bermudes) et expédiées au Canada des États-Unis. Ce groupe d'importations est attribué au pays d'origine des marchandises.

**7. Périodes de temps.** La statistique du commerce pour une période quelconque comprend toutes les marchandises déclarées dans les rapports sur les importations et les exportations qui ont été reçus au Bureau de la statistique durant la période civile observée.

**8. Ports.** Les tableaux du commerce canadien par ports et provinces (tableaux 13 et 14), montrent que les marchandises ont été importées ou exportées à ces ports; mais cela ne signifie pas que les marchandises importées à un port l'ont été pour consommation à ce port ou même dans la province où il est situé;

situated, neither does it imply that goods exported at any port originated there or even in the province in which the port is situated.

**9. Abbreviations.** The letters "N.O.P." mean "not otherwise provided for".

10. Revisions have been made to certain import statistics appearing in Tables 27, 28, 32, 33, 34, 35 and 37; and to certain export statistics appearing in Tables 7, 22, 24, 26, 27, 29, 32, 33, 34, 36 and 37. The figures published in this volume supersede those previously available.

**11. Special Note.** Somelate revisions to export class 6310, "Platinum and other metals of the platinum group contained in concentrates or other forms" for the calendar year 1958, and to export class 6160, "Copper in ingots, bars, cakes, slabs and billets; blister and anode copper" for the calendar years 1957 and 1958, are not included in the relevant tables of this volume, as the photocopy was already prepared before the revisions became available.

In the case of class 6310, the adjustment results from the fact that most exports of this commodity to the United States are metal refined from Canadian ores in the United Kingdom, returned to Canada, and then re-exported without further processing. Starting with January 1959 this metal has been recorded as re-exports and the adjustment shown below for 1958, which is not included in the tables of this volume, should be deducted from domestic exports to the United States and added to Canada's re-exports to that country to obtain comparability with current publications.

In the case of class 6160, the adjustment is a straight deduction from the domestic exports due to inaccuracies in reporting export values on customs entries covering exports of copper to the United Kingdom.

All the revisions shown below are included in *Trade of Canada*, Volume II, 1958, and will be included in the next issue of Volume I.

Year	Class	Country	Deduct from Domestic Exports	Add to Re-exports
1958	6310	U.S.	\$ 945,222	\$945,222
1957	6160	U.K.	\$14,861,467	..
1958	6160	U.K.	\$ 2,092,213	..

.. Figures not available.

These adjustments were published by months, in the blue pages of *Trade of Canada — Exports* for December, 1959 and January, 1960. A previous change for class 6310, amounting to \$3,864,186, which is included in this volume, was published in the blue pages of *Trade of Canada — Exports* for January, 1959.

cela ne signifie pas non plus que les marchandises exportées d'un port viennent de ce port ou même de la province où il est situé.

**9. Abréviations.** Les lettres "n.d.a." signifient "non dénommé ailleurs".

10. Des modifications ont été apportées à certaines statistiques des importations paraissant aux tableaux 27, 28, 32, 33, 34, 35 et 37; et à certaines statistiques des exportations paraissant aux tableaux 7, 22, 24, 26, 27, 29, 32, 33, 34, 36 et 37. Les chiffres publiés dans le présent volume remplacent les chiffres publiés antérieurement.

**11. Note spéciale.** Certaines modifications tardives apportées à la classe d'exportation 6310 "Platine et autres métaux de ce groupe, en concentrés ou sous autre forme" pour l'année civile 1958, de même qu'à la classe 6160 "Cuivre en lingots, barres, gâteaux, planches et billettes; blisters et anodes" pour les années civiles 1957 et 1958 n'ont pu être incluses dans les tableaux du présent volume parce que la photocopie en a été faite avant que les modifications ne fussent disponibles.

Dans le cas de la classe 6310, la rectification tient à ce que la plupart des exportations de cette marchandise aux États-Unis se composent de métal affiné au Royaume-Uni à partir de minerai canadien revenu au Canada et ré-exporté sans autre transformation. À partir de janvier 1959, ce métal s'incrit dans les réexportations, et la rectification indiqués ci-dessous pour l'année 1958 et qui ne paraît pas dans les tableaux du présent volume, doit être soustraite des exportations canadiennes aux États-Unis et ajoutée aux réexportations canadiennes à ce même pays pour qu'il y ait concordance avec les dernières publications.

À la classe 6160, la rectification est une simple soustraction des exportations canadiennes à cause d'inexactitudes qui se sont glissées dans la déclaration de la valeur d'exportation aux douanes au sujet des exportations de cuivre au Royaume-Uni.

Toutes les rectifications indiquées ci-dessous paraissent dans *Commerce du Canada*, volume II, 1958, et seront incorporées dans la prochaine édition du volume I.

Année	Classe	Pays	Soustraire des exportations domestiques	Ajouter aux ré-exportations
1958	6310	É.-U.	\$ 945,222	\$945,222
1957	6160	R.-U.	\$14,861,467	..
1958	6160	R.-U.	\$ 2,092,213	..

.. Nombres indisponibles.

Ces rectifications ont été publiées par mois dans les pages bleues de *Commerce du Canada — Exportations* en décembre 1959 et janvier 1960. Une modification antérieure à la classe 6310 (\$3,864,186), qui paraît dans le présent volume, a été publiée dans les pages bleues de *Commerce du Canada — Exportations* en janvier 1959.

## TREATMENT OF GOLD IN CANADIAN TRADE STATISTICS

The general use of gold as a money metal gives it special attributes which distinguish it from other commodities in trade. In particular, international movements of gold are determined largely by monetary factors and therefore may fluctuate widely from period to period owing to other than ordinary trade or commercial considerations. Also gold is generally acceptable; it does not have to surmount tariff barriers and is normally assured a market at a fixed minimum price.

Furthermore, physical movements of gold between countries have no direct or normal relation to sales and purchases. International transactions in gold often occur without its moving across any frontier, the sales or purchases in such cases being recognized by simply setting aside or "earmarking" the gold in the vaults of a central bank. As trade statistics deal only with physical movements of commodities, they would not record all changes in stocks of gold under earmark. Yet such gold transactions would not be different in their economic nature from many physical shipments.

For these reasons movements of gold in a primary or semi-fabricated state are excluded from the statistics of Canada's commodity trade. Since January 1, 1952, the standard of exclusion in use has been that suggested by the International Monetary Fund and the United Nations Statistical Office. All gold and gold products in which the value of the gold is 80% or more of the total value are excluded. The only exception to this rule is in the items of jewellers' sweepings, where the gold content can not readily be separated from the other metals.

Since gold is produced in Canada primarily as an export commodity, a series showing new gold production available for export is published regularly as a supplement to the trade statistics. This series is the equivalent of gold production in Canada exclusive of gold held by producers before the refining stage (whether at the mine, in transit, or at the Mint) and less any gold consumed by industry in Canada out of current production (normally a minor part of the total). Since November 1, 1951, the series has also excluded increases in commercial gold stocks held in safe-keeping by the Mint for the account of the mines.

Since March 21, 1956, mines not receiving aid under the Emergency Gold Mining Assistance Act have been allowed to sell their gold to private residents and non-residents, either for export or for safe-keeping in Canada. Commencing in April, such sales are now included in the figures for new Gold Production Available for Export.

## TRAITEMENT DE L'OR DANS LA STATISTIQUE DU COMMERCE DU CANADA

L'emploi général de l'or comme métal monétaire lui confère des attributs spéciaux qui le distinguent des autres denrées dans le commerce. Ainsi, en particulier, les mouvements internationaux d'or, étant largement déterminés par des facteurs d'ordre monétaire, peuvent beaucoup fluctuer d'une période à l'autre pour des raisons autres que les raisons ordinaires d'ordre commercial. En outre, l'or est généralement accepté; il n'a pas à surmonter les barrières tarifaires et trouve normalement marché à un prix minimum fixe.

De plus, les mouvements matériels d'or entre pays ne se rattachent pas directement ni normalement aux ventes et achats. Les opérations internationales intéressant l'or s'exécutent souvent sans que l'or franchisse la frontière; en pareils cas, les ventes ou achats sont reconnus simplement par la mise de côté ou l'affectation d'or dans les chambres fortes d'une banque centrale. Comme elle porte uniquement sur les mouvements matériels des denrées, la statistique du commerce ne saurait enregistrer tous les changements apportés à l'or affecté. Et pourtant ces opérations intéressant l'or ne diffèrent pas du point de vue économique d'une foule d'expéditions matérielles.

Voilà pourquoi les mouvements d'or brut ou semi-ouvré ne figurent pas dans la statistique du commerce canadien de denrées. Depuis le 1<sup>er</sup> janvier 1952, la règle adoptée est celle qu'ont proposée le Fonds monétaire international et le Bureau de statistique des Nations Unies: exclure tout l'or et tous les produits aurifères dans lesquels la valeur de l'or constitue 80 p. 100 ou plus de la valeur totale. Seules font exception les balayures de bijoutier dont la teneur en or ne peut pas facilement être séparée des autres métaux.

Comme l'or est avant tout produit au Canada comme denrée d'exportation, une série indiquant la production nouvelle d'or exportable paraît régulièrement comme supplément de la statistique du commerce. Cette série équivaut à la production d'or au Canada, à l'exclusion de l'or détenu par les producteurs avant l'affinage (à la mine, en cours de route ou à la Monnaie) et de l'or consommé par l'industrie au Canada et prélevé sur la production courante (normalement une petite partie du total). Depuis le 1<sup>er</sup> novembre 1951, la série a aussi fait exclusion des augmentations de stocks d'or gardés en sûreté par la Monnaie pour le compte des mines.

Depuis le 21 mars 1956, les mines, qui ne reçoivent pas d'aide en vertu de la loi d'urgence sur l'aide à l'exploitation des mines d'or, ont été autorisées à vendre leur or à des particuliers résidant ou non résidant, soit pour l'exportation soit pour le conserver en sûreté au Canada. Depuis avril, ces ventes sont incluses dans les chiffres sur la production d'or neuf destiné à l'exportation.

Because the value of new gold production available for export is a production series, a breakdown of the figures into transactions with individual countries is not possible. Much of this gold is offset in the balance of payments accounts by an increase in Canada's official reserves, rather than by the receipt of exchange from another country. The United States has been for many years the chief market for Canada's gold production, but such commercial exports of gold as now occur are normally directed to other markets.

Comme la statistique de la valeur de la production nouvelle d'or exportable est une statistique de la production, il n'est pas possible de décomposer les chiffres suivant les opérations intervenues avec chaque pays. Une bonne partie de cet or est contrebalancé dans les comptes de la balance des paiements par une augmentation des réserves officielles du Canada plutôt que par la réception de devises d'un autre pays. Les États-Unis sont depuis plusieurs années le principal marché de l'or produit au Canada, mais les exportations commerciales d'or comme il en est aujourd'hui se dirigent normalement vers d'autres marchés.

<sup>1</sup> Canadian Farm Products cover, for exports, commodities actually produced in their original form on Canadian farms; and for imports, commodities of which the basic raw materials are such as Canadian farms produce. Foreign Farm Products cover, for both imports and exports, materials or commodities such as Canada does not produce, e.g.—cane sugar, tea, rubber, cotton, silk, etc.

### VALUE, PRICE AND VOLUME INDEXES OF EXPORTS AND IMPORTS

Changes in the value of exports or imports between two periods may be caused by variations in the quantity or volume of goods exported or imported, by fluctuations in the prices at which trade is transacted, or by a combination of these factors. If the general level of prices should rise between two periods this will tend to increase the value of trade in the second period even in the absence of an increase in the volume of goods bought and sold. A decline in the price level will tend to depress trade values. Similarly, quantity changes may affect trade values in the absence of price change. When prices and quantities change in the same direction they will produce very sharp value changes in that direction. Or prices and quantities may change in opposite directions, which may cause values to increase while quantities decrease or quantities to increase while values decrease. To assess properly the meaning of changes in the value of trade it is therefore necessary to know the individual influence of price and volume movements on the value totals.

Table 38 presents a comparison of the declared (statistical) values of domestic exports and imports in current dollars and in constant dollars, together with annual indexes of the declared values, prices and physical volume of Canada's trade. Tables 39-44 present the monthly record from January, 1952 of the value, price and volume indexes published regularly in the Trade of Canada monthly reports.<sup>1</sup> These indexes were set up on the interim reference base 1948 = 100, and are computed on that basis pending conversion to the 1949 base which was since adopted as the official post-war reference base for the Dominion Bureau of Statistics. Monthly indexes have not been calculated for periods prior to July, 1945, but an annual record from 1926 has been published.<sup>2</sup>

The indexes are computed in the following manner. The value index expresses the value of trade in a given period as a percentage of the value in the base period. The price index is of the fixed-weight aggregative (Laspeyres) type, and combines unit values calculated from the trade statistics with specified wholesale or other price quotations. These latter quotations are used where inadequate quantity reporting or insufficiently

### INDICES DE LA VALEUR, DES PRIX ET DU VOLUME DES EXPORTATIONS ET DES IMPORTATIONS

Les changements de la valeur des exportations ou des importations d'une période à l'autre tiennent soit aux variations de la quantité ou du volume des marchandises exportées ou importées, soit aux fluctuations du prix pratiqué, soit à la conjugaison de ces deux facteurs. Si le niveau général des prix augmente d'une période à l'autre, la valeur du commerce de la seconde période aura tendance à augmenter même si le volume des marchandises achetées ou vendues n'augmente pas. Si le niveau des prix baisse, la valeur du commerce aura tendance à baisser. De même, les changements de la quantité peuvent, sans que les prix changent, modifier la valeur du commerce. Lorsque les prix et les quantités évoluent dans le même sens, il en résulte de très vifs changements de valeur dans ce sens. Enfin, les prix et les quantités peuvent évoluer en sens contraire et alors les valeurs augmentent tandis que les quantités diminuent ou bien les quantités augmentent tandis que les valeurs diminuent. Pour apprécier pleinement la portée des changements de la valeur du commerce, il faut donc connaître l'effet particulier du mouvement des prix et du volume sur la valeur totale.

Le tableau 38 compare la valeur (statistique) déclarée des exportations domestiques et des importations en dollars valeur courante et en dollars valeur constante et donne les indices annuels de la valeur déclarée, des prix et du volume physique du commerce canadien. Les tableaux 39-44 donnent depuis janvier 1952 les indices mensuels de la valeur, des prix et du volume publiés régulièrement dans les rapports mensuels portant sur le commerce du Canada<sup>1</sup>. Ces indices ont été calculés d'après la période de base provisoire de 1948 à 100 et sont calculés sur cette base jusqu'à la conversion à la base de 1949, qui a été adoptée depuis comme période de base officielle d'après-guerre par le Bureau fédéral de la statistique. Il n'existe pas d'indices mensuels pour les périodes antérieures à juillet 1945, mais un état annuel à compter de 1926 a déjà paru<sup>2</sup>.

Voici comment sont établis les indices. L'indice de la valeur exprime la valeur du commerce d'une période donnée en pourcentage de la valeur de la période de base. L'indice des prix est un indice collectif à coefficient fixe (type Laspeyres) et combine les valeurs unitaires établies d'après la statistique commerciale avec certains prix de gros ou autres. Ces prix sont utilisés lorsque l'insuffisance de données quantitatives ou des articles insuffisamment homo-

<sup>1</sup> For a detailed description of these series see *Export and Import Price Indexes by Months, July, 1945-June, 1950 (1948=100)*, Dominion Bureau of Statistics, 1950 (Reference Paper No. 8).

<sup>2</sup> For a description of the earlier annual data see *Export and Import Price Indexes, 1926-1948 (1935-39=100)*, Dominion Bureau of Statistics, 1949 (Reference Paper No. 5), and for the latest revision of these data see *Review of Foreign Trade, First Half Year 1954*, Dominion Bureau of Statistics, 1954, pp. 23-31.

<sup>1</sup> Ces séries sont expliquées en détail dans *Indices des prix des exportations et des importations, par mois, juillet 1945 - juin 1950 (1948=100)*, Bureau fédéral de la statistique, 1950 (Document de référence n° 8).

<sup>2</sup> Les données annuelles antérieures se trouvent dans *Indices des prix des exportations et des importations, 1926-1948 (1935-9=100)*, Bureau fédéral de la statistique, 1949 (Document de référence n° 5); voir les dernières révisions de ces données dans *Revue du commerce extérieur du Canada, premier semestre, 1954*, Bureau fédéral de la statistique, 1954, pp. 23-31.

homogeneous items in the trade statistics prevent the obtaining of sufficiently representative unit value series. The volume index is then derived by dividing the value index by the corresponding price index, and is, therefore, of the currently-weighted (Paasche) type. The relationship between these series is thus multiplicative, not additive. The constant dollar values of Table 38 are computed by dividing the declared values by corresponding price indexes. As division by the published (Laspeyres) price indexes yields constant dollar values in which the groups do not sum to the total, a separate price index of the moving-current-weight (Paasche) type has been used in this computation.

In computing the price index certain minor adjustments were made to the regular grouping of commodities used in the trade statistics, and all three indexes are presented on the basis of these adjusted groups. Thus the groups "agricultural and vegetable products" and "animals and animal products" are combined into one group now titled "agricultural and animal products"; the sub-group "rubber and its products" is transferred to the "miscellaneous products" group; and ships are transferred to the "iron and steel and products" group. In the case of imports only, plumbing and heating equipment is transferred to the "non-ferrous metals and products" group, phosphate rock to the "chemicals and fertilizer" group, and advertising matter to the "miscellaneous products" group. "Imports for the use of British or N.A.T.O. countries" (9196) are deducted from "miscellaneous products" and total imports. Otherwise the totals to which the indexes apply are those elsewhere published in the trade statistics.

gènes dans la statistique commerciale ne permettent pas d'établir des séries de valeurs unitaires suffisamment représentatives. On obtient ensuite l'indice du volume en divisant l'indice de la valeur par l'indice des prix correspondant; l'indice du volume est donc un indice à pondération courante (type Paasche). Ces séries sont ainsi en rapport multiplicatif et non pas additif. On obtient les valeurs en dollars constants du tableau 38 en divisant les valeurs déclarées par les indices des prix correspondants. Comme la division par les indices des prix publiés (Laspeyres) donne des valeurs en dollars constants dont les groupes, si on les additionne, ne correspondent pas avec le total, on a utilisé pour établir ce calcul, un indice des prix distinct à poids courant mobile (type Paasche).

Dans le calcul de l'indice des prix, on a apporté certains ajustements secondaires au groupement normal des denrées utilisé par la statistique commerciale et tous les trois indices se fondent sur ces groupes ajustés. Voici ces ajustements: les groupes "produits agricoles et végétaux" et "animaux et produits animaux" sont réunis en un seul groupe maintenant nommé "produits agricoles et animaux"; le sous-groupe "caoutchouc et produits" est passé au groupe "produits divers"; et les bateaux sont passés au groupe "fer et acier et produits". Dans le cas des importations seulement, l'équipement de tuyauterie et de chauffage est passé au groupe "métaux non ferreux et produits", la roche phosphatée, au groupe "produits et engrais chimiques", et les matières publicitaires, au groupe "produits divers". "Importations à l'usage des pays britanniques ou membres de l'OTAN" (9196) sont supprimées des "produits divers" et des importations totales. Hormis cela, les totaux que visent les indices sont les totaux figurant ailleurs dans la statistique commerciale.

## TRADE BY THE STANDARD INTERNATIONAL TRADE CLASSIFICATION<sup>1</sup>

Users of foreign trade statistics of more than one country have always been faced with serious difficulties arising from the limited comparability between such data, most countries having their own distinct statistical classifications of commodities. The League of Nations made an effort to solve this problem by suggesting as a basic classification its *Minimum List of Commodities for International Trade Statistics*. The League's work was resumed after the war under the direction of the United Nations Statistical Commission which, in 1950, approved the *Standard International Trade Classification*. National governments were urged to make use of the S.I.T.C., either by adopting it as a primary classification in compiling their trade statistics, or by converting national statistical data to it for international use. Canadian trade statistics are now converted to the S.I.T.C. and current data are published, along with the statistics of several other countries, in the United Nations *Commodity Trade Statistics* series.<sup>2</sup>

Statistics showing Canadian trade during the calendar years 1957 and 1958 on the basis of the S.I.T.C. are presented in the following table. It should be noted that Table 45 relates to total exports (Canadian produce plus foreign produce), and that totals for imports differ from those appearing in other tables of this report by the exclusion of foreign coin, except gold, and repairs on ships and vessels.

The keys for converting Canada's export and import commodity statistics to the S.I.T.C. have been revised since the publication of the first indexed edition of the S.I.T.C. in April, 1953. The data for 1957 and 1958 appearing in Table 45 were compiled according to the revised keys, and therefore do not compare exactly with figures published in this table prior to 1953. It is expected that a few further revisions may be made to the present commodity indexes for the S.I.T.C. After this question has been clarified revised data will be prepared for earlier years.

## COMMERCE SELON LA CLASSIFICATION TYPE POUR LE COMMERCE INTERNATIONAL<sup>1</sup>

La statistique du commerce extérieur de plus d'un pays a toujours présenté à ses utilisateurs de graves difficultés en raison de la comparabilité limitée des données, la plupart des pays ayant leur propre classification des marchandises. La Société des Nations, cherchant à résoudre le problème, avait proposé comme classification de base sa *Liste minimum de marchandises pour la statistique du commerce international*. Le travail de la Société a été repris après la guerre sous la direction de la Commission de statistique de l'Organisation des Nations Unies qui, en 1950, approuva la *Classification type pour le commerce international*. Les gouvernements nationaux furent priés de se servir de la C.T.C.I., soit comme classification de base dans l'établissement de leur statistique du commerce, soit en modifiant la présentation de leur statistique conformément à la nouvelle classification. Le Canada a déjà adapté sa statistique du commerce à la C.T.C.I., et les données courantes de mêmes que celles de plusieurs autres pays sont publiées dans le bulletin des Nations Unies *Commodity Trade Statistics*<sup>2</sup>.

Les statistiques du commerce canadien pour les années civiles 1957 et 1958 sont données dans les tableaux qui suivent, d'après la C.T.C.I. Il est à noter que le tableau 45 a trait aux exportations totales (produits canadiens et réexportations) et que les totaux des importations diffèrent de ceux des autres tableaux du présent rapport, puisqu'ils ne comprennent pas le numéraire étranger, sauf l'or, ni la réparation des navires et vaisseaux.

Les explications sur la façon de ramener la statistique des exportations et des importations de marchandises du Canada à la C.T.C.I. ont été révisées depuis la publication de la première édition indexée de cette classification, en avril 1953. Les données pour 1957 et 1958 qui paraissent au tableau 45 ont été calculées d'après cette révision et, en conséquence, ne sont pas rigoureusement comparables aux chiffres du même tableau publiés avant 1953. Quelques autres révisions seront peut-être faites aux indices des denrées pour la C.T.C.I. Cette question une fois réglée, des données révisées seront établies pour les années antérieures.

### IMPORTS FROM CENTRAL AND SOUTH AMERICA

Until the middle of 1946, all imports were credited in Canadian trade statistics to the countries from which the goods were consigned to Canada. But beginning in July, 1946, a new method was adopted for crediting goods produced in Central or South America (including Bermuda and the West Indies) but consigned to Canada from the United States (and usually purchased in that country). This was to credit such shipments to the country in which the goods were originally produced.

At the time when this change was made its effect on Canadian trade statistics was minor. Under immediate post-war trading conditions almost all shipments of Central and South American goods were consigned to Canada from the country in which the goods were produced. With the return of more normal trading conditions a much greater proportion of these countries' goods has since come to be consigned to Canada from entrepôt markets in the United States.

A survey was begun in 1953 to determine the amount of imports credited to Central or South American countries which was actually consigned to Canada from the United States. Columns 4 and 8 of Table 46 show the value of imports thus recorded in 1957 and 1958. While only a minor part of recorded imports from Commonwealth countries in Central and South America was actually consigned to Canada from the United States, and while the proportion was also low for Venezuela and the Netherlands Antilles (whose chief export to Canada is oil), for most other countries the amounts concerned were substantial. During the 1953-1955 period, on the average about 30 per cent of total imports recorded as from these other countries was actually consigned to Canada from the United States.

For many years Canadian trade statistics have included tables showing imports which moved *through* the United States en route to Canada, though consigned to Canada from some third country (see Tables 15 and 17). One use of these tables is to show the amount of Canadian imports handled by United States seaports rather than by Canadian seaports. But when imports of goods of Central or South American origin consigned to Canada from the United States began to be classified by country of origin, the tables of trade via United States ports no longer fully revealed the extent to which Canadian importers used United States ports. The reason is that this special category of imports enters neither the total of imports from the United States nor the total of imports consigned from a third country and shipped to Canada *via* a United States seaport. Consequently imports from Central or South American countries direct to Canadian

### IMPORTATIONS DE L'AMÉRIQUE CENTRALE ET DE L'AMÉRIQUE DU SUD

Jusqu'au milieu de 1946, toutes les importations du Canada étaient attribuées dans la statistique du commerce du Canada aux pays d'où les marchandises étaient expédiées au Canada. A compter de juillet 1946, cependant, une nouvelle méthode a été adoptée à l'égard des marchandises produites dans l'Amérique centrale ou l'Amérique du Sud (y compris les Bermudes et les Antilles), mais expédiées des États-Unis au Canada (et habituellement achetées aux États-Unis), afin de les attribuer au pays où elles étaient originellement produites.

A l'époque où le changement a été opéré, la statistique du commerce du Canada s'en est peu ressentie. Au lendemain de la guerre alors que régnaient des conditions commerciales bien particulières, presque tous les envois de marchandises de l'Amérique centrale et de l'Amérique du Sud étaient expédiés au Canada à partir du pays même où elles étaient produites. Depuis le retour de conditions plus normales, une proportion beaucoup plus grande des marchandises de ces pays sont expédiées au Canada à partir des marchés américains où elles sont entreposées.

On a commencé un relevé en 1953 afin de déterminer le chiffre des importations attribuées aux pays de l'Amérique centrale ou de l'Amérique du Sud qui étaient en fait expédiées des États-Unis au Canada. Les colonnes 4 et 8 du tableau 46 montrent la valeur de ces importations en 1957 et 1958. Si seulement une faible partie des importations enregistrées des pays du Commonwealth situés en Amérique centrale ou en Amérique du Sud étaient réellement expédiées des États-Unis au Canada et si la proportion en était faible aussi quant au Venezuela et aux Antilles néerlandaises (dont la principale marchandise exportée au Canada est l'huile), elle était considérable dans le cas de la plupart des autres pays. En moyenne, 30 p. 100 environ de toutes les importations enregistrées comme provenant de ces autres pays ont été en fait expédiées des États-Unis au Canada au cours de la période 1953-1955.

Depuis plusieurs années, la statistique du commerce du Canada comprenait des tableaux montrant les importations acheminées *via* les États-Unis sur le Canada, bien qu'elles fussent expédiées de quelque troisième pays au Canada (voir tableaux 15 et 17). Ces tableaux servent en particulier à montrer le chiffre des importations canadiennes qui sont passées par les ports de mer américains plutôt que par les ports de mer canadiens. Cependant, lorsqu'on a commencé à classer selon le pays d'origine les importations de marchandises provenant de l'Amérique centrale ou de l'Amérique du Sud, les tableaux des marchandises passant par les ports américains ne montraient plus pleinement jusqu'à quel point les importateurs canadiens utilisaient les ports américains. La raison en est que cette catégorie spéciale d'importations ne figure ni dans le total des importations provenant des États-Unis ni dans celui des importations provenant d'un troisième pays et expédiées au Canada *via* un port de mer américain. En conséquence, les

seaports seemed greater than was in fact the case (the totals being estimated by deducting the data in Table 17 from those in Table 10) by the amount of goods consigned from the United States but credited to some Central or South American country. However the correct totals for direct shipments can now be obtained from Table 46.

Table 46 shows in columns 1 and 5 total imports recorded as from Central or South American countries (these figures also appear in Table 10). The amount of goods originating in Central or South America but consigned to Canada from the United States is shown in columns 4 and 8 (such shipments would be credited to the United States, rather than as in this case to the country of origin, under the procedure used to classify other imports). Columns 3 and 7 show imports consigned to Canada from Central or South American countries but shipped *through* a United States seaport (these figures also appear in Table 17). Thus direct shipments to a Canadian port from such countries, as shown in columns 2 and 6, can be obtained by deducting columns 3 and 4 and columns 7 and 8 from columns 1 and 5, respectively.

importations en provenance des pays de l'Amérique centrale ou de l'Amérique latine et acheminées directement sur les ports de mer canadiens semblaient plus élevées qu'en réalité (on évalue les chiffres en soustrayant ceux du tableau 17 de ceux du tableau 10) en raison, de la quantité de marchandises expédiées des États-Unis mais attribuées à quelque pays de l'Amérique centrale ou de l'Amérique latine. Au moyen du tableau 46 on peut toutefois obtenir les chiffres exacts quant aux expéditions directes.

Le tableau 46 montre aux colonnes 1 et 5 les importations totales enregistrées comme provenant des pays de l'Amérique centrale ou de l'Amérique latine (ces chiffres paraissent aussi au tableau 10). La quantité de marchandises en provenance de l'Amérique centrale ou de l'Amérique latine mais expédiées au Canada des États-Unis est indiquée aux colonnes 4 et 8 (ces expéditions doivent être attribuées aux États-Unis plutôt que, ainsi que dans le cas présent, au pays d'origine d'après la même méthode que celle qui sert au classement des autres importations). Les colonnes 3 et 7 donnent les importations expédiées des pays de l'Amérique centrale et de l'Amérique latine au Canada mais acheminées sur le Canada *via* un port de mer des États-Unis (ces chiffres paraissent aussi au tableau 17). Ainsi les expéditions directes de ces pays sur un port de mer du Canada, ainsi qu'il est indiqué aux colonnes 2 et 6, peuvent être calculées en soustrayant, respectivement, les colonnes 3 et 4 et les colonnes 7 et 8 des colonnes 1 et 5.

### CHANGE IN CLASSIFICATION OF URANIUM ORES AND CONCENTRATES

Prior to October 1, 1954, exports of uranium ores and concentrates were included in export statistical class 6580, non-ferrous ores, n.o.p., at nominal values only. This procedure resulted in a significant undercounting of the total value of Canadian exports; during the first nine months of 1954 alone, the shortfall amounted to \$17 million. Consequently, as of October 1, 1954, arrangements were made to show the true value of uranium exports, but to prevent its disclosure uranium ores and concentrates were transferred to statistical class 8490, drugs and chemicals, n.o.p.

Following the relaxation of restrictions on the publication of statistics relating to exports of uranium, a new export statistical class 6560 was established as of January 1, 1957. The transfer of uranium from class 8490 to 6560 has affected the various alternative classifications of Canadian trade in the following way:

Commodity Classification	Changes due to Transfer of Uranium from 8490 to 6560 as of January 1, 1957
By Component Material	Chemicals and Allied Products to Non-ferrous Metals and Products
By Origin	Mixed Origin to Mineral Origin

### MODIFICATION APPORTÉE À LA CLASSIFICATION DES MINÉRAIS ET CONCENTRÉS D'URANIUM

Jusqu'au 1<sup>er</sup> octobre 1954, les exportations de minerais et de concentrés d'uranium étaient classées dans le groupe statistique d'exportations n° 6580, (minerais non ferreux, n.d.a.), et on leur attribuait une valeur nominale. L'emploi de cette formule a provoqué une importante sous-évaluation du total des exportations canadiennes, sous-évaluation qui, pendant les neuf premiers mois de 1954, atteignait déjà quelque dix-sept millions de dollars. C'est pourquoi il a été décidé que, partant du premier octobre 1954, la valeur réelle des exportations d'uranium serait portée dans les statistiques; mais afin d'en dissimuler le montant, les minerais et concentrés d'uranium ont été transférés au groupe statistique n° 8490, (drogues et produits chimiques, n.d.a.).

Dès qu'ont été levées les restrictions qui pesaient sur la publication de statistiques touchant l'exportation de l'uranium, on a créé un nouveau groupe statistique d'exportations, (n° 6560), qui est entré en vigueur le premier janvier 1957. Le transfert de l'uranium du groupe 8490 au groupe 6560 a eu les effets suivants sur les différentes classifications du commerce du Canada:

Classification de la marchandise	Modifications nécessaires par suite du transfert, en date du 1 <sup>er</sup> janvier 1957, de l'uranium du groupe 8490 au groupe 6560
Selon l'élément principal	Produits chimiques et leurs dérivés à Métaux non ferreux et leurs produits
Selon leur origine	Origines diverses à Origine minérale
Selon le degré de transformation	Complètement ou principalement ouvrées à Matières premières
Selon l'usage ou la destination	Diverses et non classifiées à Matières premières servant à la production
Selon la C.T.C.I.	Produits chimiques à Matières brutes, non comestibles

In this volume the data affected by the classification changes described above (Tables 7, 22, 26, 27 and 34) are adjusted for the years 1954-56 according to the classification of uranium (class 6560) in effect as of January 1, 1957. All exports of uranium ores and concentrates during the period October 1, 1954 to December 31, 1956 were to the United States. The value of these exports, by months, is shown in the following statement:

Dans le présent volume, les différentes statistiques qui sont touchées par les modifications en question (tableaux 7, 22, 26, 27 et 34) ont été rectifiées pour les années 1954 à 1956 conformément à la classification de l'uranium dans le groupe 6560, en vigueur depuis le premier janvier 1957. Tous les minerais et concentrés d'uranium exportés entre le premier octobre 1954 et le 31 décembre 1956 ont été dirigés vers les États-Unis. La valeur mensuelle de ces exportations est indiquée au tableau suivant:
